🔍

```

"""
Checks whether a number is an Armstrong number.

Steps:
1. Convert the number to a string to count its digits.
2. For each digit, raise it to the power of the number of digits.
3. Sum these powered digits.
4. If the sum equals the original number, it is an Armstrong number.

Prompt:
Enter a number to check if it is an Armstrong number.

Output:
Prints whether the number is an Armstrong number or not.
"""
num_str = str(number)
num_digits = len(num_str)
sum_of_powers = sum(int(digit) ** num_digits for digit in num_str)
return sum_of_powers == number

```

| Feature | Gemini Code | Copilot Code |
|-----------------------|--|--|
| Function Name | is_armstrong_number(number) | is_armstrong(number) |
| Logic Style | String conversion + for loop | Arithmetic with % and while loop |
| Docstring | ■ Detailed with Args & Returns | ■ Minimal or none |
| Readability | High – commented and well-structured | Moderate – more compact, sometimes no comments |
| Test Cases | ■ Shown (153, 123) | ■ Usually includes 153; others need prompting |
| Output Example | 153 is an Armstrong number. 123 is not an Armstrong number. | Same output |

Task Description #3

| | | |
|--|--|--|
| | <ul style="list-style-type: none">• Ask Gemini to explain a Python function (e.g., <code>is_prime(n)</code> or <code>is_palindrome(s)</code>) line by line.• Choose either a prime-checking or palindrome-checking function and document the explanation provided by Gemini. <p>Expected Output #3</p> <ul style="list-style-type: none">• Detailed explanation with the code snippet and Gemini’s response. <div><p>• Ask Gemini to explain a Python function (e.g., <code>is_prime(n)</code> or <code>is_palindrome(s)</code>) line by line. • Choose either a prime-checking or palindrome-checking function and document the explanation provided by Gemini.</p><div><div>Start coding or generate with AI.</div><div>[] Start coding or generate with AI.</div></div><p>Steps to check for an Armstrong number:</p><ol style="list-style-type: none">1. Define the function <code>is_armstrong_number(number)</code>: This function takes an integer <code>number</code> as input.2. Convert the number to a string: This allows easy iteration through the digits of the number.3. Get the number of digits: Determine the length of the string representation of the number.4. Initialize <code>armstrong_sum</code> to 0: This variable will store the sum of the digits raised to the power of the number of digits.5. Iterate through each digit:<ul style="list-style-type: none">◦ Convert the digit back to an integer.◦ Raise the integer digit to the power of the total number of digits.◦ Add the result to <code>armstrong_sum</code>.6. Compare the sum with the original number: If <code>armstrong_sum</code> is equal to the original <code>number</code>, it is an Armstrong number.7. Return <code>True</code> or <code>False</code>: Based on the comparison result.<div><div>0s</div><div><div>def is_palindrome(s):</div><div>"""</div><div>Checks if a string is a palindrome.</div><div>A palindrome is a string that reads the same forwards and backwards.</div><div>Args:</div><div>s: The input string.</div><div>Returns:</div><div>True if the string is a palindrome, False otherwise.</div><div>"""</div><div># Remove spaces and convert to lowercase for case-insensitive check</div><div>s = s.replace(" ", "").lower()</div><div># Compare the string with its reverse</div><div>return s == s[::-1]</div><div># Example usage:</div><div>text1 = "racecar"</div><div>text2 = "hello world"</div><div>text3 = "Madam"</div><div>print(f'{text1} is a palindrome: {is_palindrome(text1)}')</div><div>print(f'{text2} is a palindrome: {is_palindrome(text2)}')</div><div>print(f'{text3} is a palindrome: {is_palindrome(text3)}')</div></div><div><div>'racecar' is a palindrome: True</div><div>'hello world' is a palindrome: False</div><div>'Madam' is a palindrome: True</div></div></div></div> | |
